| Description | | | |
| All M12 ports are current monitored regarding 0 V total current (contact 3), and are switched off in case of short-circuit (self-resetting). Supply voltage remains the same. In case of a fault the DIAGNOSTIC signal ?act (wire ?brown? 2) drops from 24 V DC to 0 V. The operator can immediately react by analyzing the diagnosti downtime - easy trouble-shooting due to red LED ?ERROR? and red LED at the plug position. | tive high? to the PLC | | |
